I am a computer science student and software generalist who enjoys building systems end to end, from user interfaces and APIs to infrastructure and deployment. I learn best by building and operating real projects, with a particular interest in backend systems, automation, and understanding how the different parts of a system work together.

SKILLS

Languages: Python, TypeScript, JavaScript, Java, C#, Bash, SQL

Frontend: React, Tailwind CSS, Vite, TanStack Query, HTML, CSS

Backend & APIs: FastAPI, Node.js, tRPC, REST APIs

Data & Testing: MongoDB, Redis, MySQL, pytest, Vitest

Infrastructure & Delivery: Docker, Linux, GitHub Actions, Terraform, Azure, AWS

Additional Experience: Django, Flask, Spring, Vue, Nx, PyTorch, Ollama

EDUCATION

B.Sc. in Computer Science, Université Laval *Expected graduation: 2026 | Québec, Canada*

Relevant Coursework: Software Quality and Metrics, Advanced Web Development, Data Engineering

EXPERIENCE

Functional Analyst, Software Delivery, Desjardins

Internship | Montréal, QC | Sep 2024 - Dec 2024

- Clarified requirements between business and technical teams.
- Produced functional documentation and process workflows.
- Created and validated test cases before deployment.
- Supported the delivery of a key PaaS initiative before code freeze.

SELECTED PROJECTS

Nootflix: Self-Hosted Media Platform

Python, TypeScript, React, MongoDB, Redis, Docker

[nootflix](https://nootflix.com)

- Built an end-to-end platform that combines a React client, TypeScript API gateway, Python processing services, databases, and external media integrations.
- Designed workflows that track media from search and acquisition through normalization, transcoding, reconciliation, and playback readiness.
- Deployed interconnected services across a VPS and home server, including authentication, CI/CD, service health monitoring, and containerized infrastructure.

CADE: Automation and Integration Backend ([GitHub](#))

TypeScript, Node.js, MongoDB, Docker

- Built a backend that processes portfolio messages, stores interaction data, automates email responses, and integrates with Discord and GitHub.
- Implemented session and referral tracking to capture navigation events and better understand how visitors interact with the portfolio.
- Added automated tests, CI workflows, structured error handling, and documentation to keep the service maintainable and reliable.

NootFolio: Interactive Developer Portfolio ([GitHub](#))

React, TypeScript, Tailwind CSS

nootfolio.ca

- Designed and built a responsive portfolio with animated navigation, multilingual content, theme switching, project displays, and an interactive contact experience.
- Connected the frontend to CADE for contact processing and custom session, referral, and interaction tracking.
- Took ownership of the complete product, from visual design and frontend architecture to backend integration and deployment.
